

# WHAT ARE WE MEASURING?

A number is not clear until the thing being counted is clear.

Before you trust a score, rating, graph, survey, or AI answer, ask what it actually measures.

A number might measure:

- skill
- confidence
- effort
- mood
- who got asked
- how the question was worded

## ASK:

- ★ What is being counted?
- ★ What unit is being used?
- ★ What does the scale mean?
- ★ Who decided what counts?
- ★ What does this number leave out?

**NAME THE THING BEFORE YOU TRUST THE NUMBER.**
